Election/Restrictions

Applicant's election without traverse of claims 1,10-26,30,31,39-52 in the reply filed on 6/14/05 is acknowledged. Claims 31,32, have been changed to claims 30 ad 31.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,10-16, 19-22,24-26,30,31, 39-52 are rejected under 35 U.S.C. 102(b) as being anticipated by Jackson (5,720,751).

With respect to claims 1, 19, 24, Jackson discloses an instrument capable of inserting an intervertebral space comprising a pair of arms, as shown in FIGS,22,33, 15,16; connected to each other and including an upper arm and a lower arm, the arms being closable towards each other capable of entering recesses in and securing na intervertebral implant therebetween and separable away from each other for removal from the intervertebral implant; each arm including at its outer end a recess engaging portion (165) adapted to be inserted in a recess of an intervertebral implant; and a spacer (20) located between the arms to limit movement of the upper ad lower parts towards each other when securing the implant; as best seen in FIGS. 18, 22.

A recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to

Art Unit: 3732

patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim.

With respect to claims 10-16, 20-22,25-26; Jackson discloses all the limitations; as best seen in FIGS. 14,15,16,18,22,23.

With respect to claims 30,31,39-52, the method steps, as set forth would have been inherently carried out in the operation of the device, as set forth above.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 10-12,24,30,31 are rejected under 35 U.S.C. 102(e) as being anticipated by Winterbottom et al. (20030083747).

With respect to claims 1, 24, Winterbottom et al. disclose an instrument for inserting an intervertebral implant into an intervertebral space comprising a pair of arms, as shown in FIG.68 connected to each other and including an upper arm and a lower arm, the arms being closable towards each other to enter recesses in and secure an intervertebral implant therebetween and separable away from each other for removal from the intervertebral implant; each arm including at its outer end a recess engaging portion (440,442) adapted to be inserted in a recess of an intervertebral implant.; and pivot member (448).

With respect to claims 10-12, Winterbottom et al. disclose all the limitations; as set forth in page 14, para [0223] and as best seen FIG. 68.

With respect to claims 30,31 the method steps, as set forth would have been inherently carried out in the operation of the device, as set forth above.

Page 4

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 13-16,19-22,25-26,39-52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jackson (5,720,751) in view of Winterbottom et al. (20030083747).

With respect to claims 13-16,19-22,25-26, it is noted that Winterbottom et al did not teach of a spacer limiting the movement of the upper and lower arms towards each other when securing the implant; as claimed by applicant. However, Jackson, in a similar art (insertor) evidences the use of a spacer that limit the movement of the upper and lower arms to drive, push or force an implant into a space or receiving channel.

Therefore, given the teaching of Jackson, it would have been obvious to one havig ordinary skill in the art at the time the invention was made to modify the spacer of Winterbottom et al., as taught by Jackson, to drive, force or push the implant into the receiving channel.

With respect to claims 39-52, the method steps, as set forth, would have been obviously carried out in the operation of the device, as set forth above.

Art Unit: 3732

Allowable Subject Matter

Claims 17, 18, 23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

3,486,505 Morrison 12-1969

6,036,692 Burel et al. 03-2000

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Pedro Philogene whose telephone number is (571) 272-4716. The examiner can normally be reached on Monday to Friday 6:30 AM to 4:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kevin P. Shaver can be reached on (571) 272-4720. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
